SUMMARY OF TABLES.

In 1896 there were received 42,077 applications for patents, 1,828 applications for designs, 77 applications for reissues, 2,271 caveats, 2,005 applications for registration of trade-marks, 59 applications for registration of labels, and 36 applications for prints. There were 23,312 patents granted, including designs, 61 patents reissued, 1,813 trade-marks registered, and 1 label and 32 prints. The number of

patents which expired was 12,133. The number of patents which were by operation of law forfeited for non-payment of the final fee was 4,736. The total expenditures were \$1,113,413.71. The receipts over expenditures were \$210,646.12, and the total balance to the credit of the Patent Office in the Treasury of the United States amounts to \$4,718,639.47.

In proportion to population more patents were issued to citizens of Connecticut than to those of any other State, one to every 759 inhabitants; and next in order, in proportion to population, come the District of Columbia with one to every 1,123; Massachusetts with one to every 1,177; Rhode Island with one to every 1,383; New Jersey with one to every 1,453; New York with one to every 1,545; Colorado with one to every 1,761, and Illinois with one to every 1,874. The States to whose citizens the fewest patents were granted in proportion to the number of inhabitants are South Carolina, one to every 31,976; Mississippi, one to every 27,438; North Carolina, one to every 23,793; Georgia, one to every 14,354; Alabama, one to every 13,880, and Arkansas, one to every 13,430.

As to foreign countries, 617 patents were granted to residents of England, a larger number than to residents of any other foreign country; to those of Germany, 543; of the Dominion of Canada, 244; of France, 194; of Switzerland, 64; of Austria-Hungary, 61; of Sweden, 40; of Scotland, 39; of Belgium, 26; of New Zealand, 26; of New South Wales, 21; of Italy, 20; of Victoria, 20; of Russia, 15; of Ireland, 13; of Denmark, 10; of Mexico, 10; of the Netherlands, 9; of Brazil, 5; of India, 5; of Spain, 5; of Chile, 4; of Cuba, 4; of South Australia, 4; of Norway, 3; of Venezuela, 3; of Argentina, 2; of Hawaii, 2; and one each to citizens respectively of the Bahama Islands, British Guiana, the Canary Islands, Cape Colony, Ceylon, Colombia, Costa Rica, Ecuador, Guatemala, the Island of Guernsey, the Island of Jersey, Jamaica, Japan, the Orange Free State, Peru, the Straits Settlements, Tasmania, and Trinidad.

STATE OF THE WORK.

At the close of the year 1896 every division in the Office was in such condition respecting its work that an application for a patent filed in any of them would receive an examination upon the merits within thirty days. This was the result of a determined effort upon the part of the entire force, extending over months, to achieve this enviable record. But the next week the work again fell into arrears in some divisions, and it cannot be maintained at that level with the present force.

ACTIONS OF THE OFFICE.

The Office received during the year 1896, 45,987 original applications for patents, for designs, for reissues, and for the registration of trade-marks, an average of 884 cases each week. In addition there came before the Office for reconsideration and action 121,375 old applications, either by reason of the filing of amendments and other writings or under Rule 65, which requires the Office to make a reexamination of all cases which for six months the applicants have neglected to prosecute.

On December 31, 1896, there were pending in the Office awaiting its action 3,140 new applications, including trade-marks and designs, and 5,727 amended cases, a total of 8,867.

On December 31, 1896, there were pending in the Office awaiting the action of applicants, exclusive of interferences, 52,495 cases. The following shows by periods the time these applications have been pending:

Number pending two years and less	31,837
Number pending two years and less than five years	18,697
Number pending five years and less than ten years	1,812
Number pending ten years and less than fifteen years	142
Number pending fifteen or more years	9

On December 31, 1896, there were pending in the Office, exclusive of interferences, 61,145 live cases, many of which had been acted upon repeatedly. 21,352 of these applications have been pending two years or more; 1,939 have been pending five years or more; 149 have been pending ten years, and 12 have been pending fifteen years. There were 101 reissue applications that have been pending five years. I find that only in 487 applications which have received consideration by the Office had action on the full merits been withheld because of informalities.

REVISED RULES OF PRACTICE.

The rules of procedure have been revised on the following lines:

First. To remove from the rules those sections of the Revised Statutes which have from time to time been incorporated in them, and in place of incorporating certain sections in the rules it has been decided to publish the statutes, revised to the present time, in full in the same pamphlet with the rules.

Second. Matters of mere information and advice not made rules, but yet incorporated in many places in the rules, have been removed to the appendix of the pamphlet edition, and this information has been somewhat expanded to cover the substance of the customary letters to this Office for information.

Third. To collate all references to the same point in one place, and generally to exclude them from every other place, and this was thought desirable for the sake of clearness.

Incidentally the rules incorporate amendments which have been made during the last four years in their proper order without change. Amended Rule 64, requiring actions of the Office to be directed throughout to the merits, appears as Rule 25 in this revision. The rule requiring reexamination *sua sponte* by the Office after six months' inaction by the applicant appears as Rule 23 in this revision. The five years' rule appears as Rule 30, and the six months' rule appears as Rule 63.

As these rules have been in effect in the Office, the first for about three years and the others for nearly two years, they cannot be regarded as changes in the present rules. Apart from these the changes are not numerous, but the principal ones are as follows:

Rule 29 provides the same showing as a prereq-

uisite to an interference with an unexpired domestic patent that is required to overcome a foreign patent or a description.

Rule 31 conforms the practice respecting entering of amendments containing new matter to that in other cases, leaving the question of new matter to be disposed of by an action of the Examiner thereon instead of by petition for refusing to enter it.

Rule 32 provides a remedy, so far as the Office is concerned, for a mistake in the nonjoinder or misjoinder of parties, and in its last paragraph enables applications to be joined where this may be done without incorporating new matter not already before the Office in some other application.

Rule 36 provides for entering a claim after final rejection for the purpose of consideration on appeal without application to the Commissioner, and the whole matter of entering amendments during interference after final rejection or after allowance is left to the Examiner without application to the Commissioner.

Rule 38, in addition to prescribing the practice for the preparation of interferences, is intended to draw into the interference in the first instance all applicants who are at that time before the Office with reference to the same subject-matter, and this rule and Rule 51 are intended to prevent an interference from being a second time fought over through every tribunal in the Office and in the Court of Appeals of the District of Columbia upon the motion of an applicant already before the Office when the interference was originally declared and who has been purposely awaiting the result of the interference only to set on foot the same contention with the prevailing party in the first interference.

Rule 39 in its provision respecting the seniority of parties returns to the practice prevailing until about five years ago, by which seniority of parties was determined by the filing date of application, but the revised rules provide that when a patent is involved in interference the patentee shall be the senior party.

The first duties of the Primary Examiner in declaring an interference are all stated in Rule 39. His duties in dissolving an interference are all stated in Rule 47. The duties of the Examiner of Interferences are stated in Rule 48. But except as above noted no change has been made in the practice of the Office respecting these matters.

Rule 49 restricts motions intended for delay, and discourages successive motions and other devices to put off the decision of the question arising upon the merits.

Rule 67, making questions *inter partes* before the Primary Examiner also *inter partes* on appeal, conforms to the present practice of the Office.

Rules 87 and 88 distinctly provide for the full effect of those equitable principles which in exceptional cases cannot be disposed of except in verbal violation or contradiction of the rules: but these principles cannot, of course, apply to the functions of the Office as an office of registration of instruments affecting titles to patents, nor is it intended to leave an open door for claiming in numerous

cases that some exception to the rules should be allowed. They are intended to meet that class of cases which are recognized by the spirit and practice of courts of equity, and not in any manner to abrogate the rules on slight pretext or on insufficient grounds.

The full text of the rules is as follows:

CORRESPONDENCE.

1. Communications to the Patent Office must be addressed to the Commissioner of Patents.

2. A double correspondence with the inventor and an assignee, or with a principal and his attorney, or with two attorneys cannot generally be allowed.

3. The assignee of the entire interest of an invention is entitled to hold the correspondence with the Office.

4. Actions by the Office which are wanting in official propriety will be canceled from the files. Communications to the Office in violation of the requirements of decorum and courtesy will not be accepted or will be returned.

5. Separate letters must be written about assignments for record, final fees for patents, orders for copies, abstracts of title, complaints against officials, and every other distinct subject of communication.

POWERS OF ATTORNEY.

6. Before any person will be recognized as an attorney his special power of attorney in each case must be filed, and thereafter the correspondence will be held with him alone.

APPLICATIONS.

7. A complete application must comprise a petition, specification, oath, and, when the nature of the case admits, drawings. Only when models or specimens are called for by the Office will they be retained as parts of the application.

8. The following order of arrangement must be observed in framing the specification:

(1) Preamble stating the name and residence of the applicant and the title of the invention, and, if the invention has been patented abroad, the countries in which it has been so patented and the date and number of each patent;

(2) General statement of the object and nature of the invention, except in design applications;

(3) Brief description of the several views of the drawings;

(4) Detailed description;

(5) Claims;

(6) Signature of inventor;

(7) Attestation of two witnesses.

9. All parts of an application, papers in prosecution thereof, actions therein, and the depositions in contested cases must be plainly printed or written, in the English language, on legal-cap paper, on but one side, and leaving a wide margin on the left. Interlineations and erasures must be clearly referred to in marginal notes.

10. Every application signed or sworn to in blank or without the actual inspection by the applicant of

the petition and specification and every application of which any part has been altered or partly filled up after being signed or sworn to will be stricken from the files.

11. If several inventions claimed in a single application be of such a nature that a single patent may not be issued to cover them, the inventor will be required to limit the description, drawing, and claim of the pending application to the one invention which he may elect.

12. When an applicant files two or more applications relating to the same subject-matter of invention, all showing but only one claiming the same thing, the applications not claiming it must contain references to the application claiming it.

13. A reservation for a future application will not be permitted in a pending application.

14. When a forfeited application is renewed, the petition, specification, oath, and drawing of the original application may be used.

15. Papers not amounting to a complete application will be returned on request.

16. Neither files, records, models, specimens, nor compositions of matter, which by official requirement have become parts of pending cases or patent cases, will be returned; nor will they be taken from the Office for any purpose except in cases where certified copies or duplicates are not sufficient, and then only in the custody of an official where he will not be required to part with the actual possession.

17. Applications will be preserved in secrecy, except as provided in the interference rules; but copies of the files of abandoned applications, upon petition therefor, for sufficient cause, properly verified and served on the applicant or his attorney, will be furnished when ordered by the Commissioner.

OATHS.

18. The applicant, if the inventor, must make oath that he does verily believe himself to be the original and first inventor or discoverer of the art, machine, manufacture, composition, or improvement for which he solicits a patent, that he does not know and does not believe that the same was ever before known or used, and must state of what country he is a citizen and where he resides. In every original application the applicant must state, under oath, whether the invention has been patented to himself, or to others with his knowledge or consent, in any country, and, if it has been, the country or countries in which it has been patented, giving the date and number of each patent; that it has not been patented in any other country than those mentioned, and that, according to his knowledge and belief, the invention has not been in public use or on sale in the United States for more than two years prior to the application in this country, and this oath must be subscribed by the affiant.

An additional oath will be required in cases where the applications have not been filed in the Patent Office within a reasonable time after the execution of the original oath.

DRAWINGS.

19. The drawing must show (1) every feature of

the invention covered by the claims. When the invention consists of an improvement upon an old machine, the drawing must (2) exhibit the invention itself disconnected from the old structure, (3) and also in another view the specific improvement and such parts of the old structure as necessarily coöperate with it. (4) Pure white paper must be used, (5) ten by fifteen inches in size, (6) of a thickness corresponding to three-ply bristol-board, (7) calendered and smooth. (8) The views must be made with the pen only, in india-ink, to secure black and solid lines, (9) and with the fewest lines consistent with clearness. (10) They must not be too fine or crowded. (11) Surface shading must be open. (12) The different views must be consecutively numbered. (13) The same reference numerals or letters must refer to the same parts throughout all the views. (14) One of the shorter edges must be the top, (15) and a clear space of an inch and a quarter below the top marginal line must be left blank for the heading, which will be supplied by the Office in uniform style. (16) Each sheet must be signed by the inventor or the name of the inventor must be signed on the drawing by the attorney in fact (17) at the lower right-hand corner, with reference to the heading, (18) attested by two witnesses at the lower left-hand corner, (19) all views and signatures must be within marginal lines one inch from the edges, and if the drawing be arranged lengthwise of the sheet (20) the views and reference-numerals must read when the heading is toward the right. (21) One of the views best calculated to explain the nature of the invention must be designed with special reference to its reproduction in THE OFFICIAL GAZETTE on a reduced scale of about one-eighth. (22) No professional designations or advertisements or addresses will be permitted upon the face of the drawings, (23) and the drawings must not be folded for transmission to the Office.

20. All reissue applications must be accompanied by new drawings upon as large a scale as the original drawings.

MODELS.

21. The model, if called for, must clearly exhibit every feature of the mechanism which forms the subject of a claim of invention, must not be more than one foot in length, width, or height, and must be substantially made.

REISSUES.

22. The application for a reissue must be accompanied by the original patent, by an offer to surrender it if reissued, and by a certified abstract of title, giving the names of all assignees owning any interest in the patent. In case the application be made by the inventor it must be accompanied by the written assent of such assignees. If the reissue be refused, the original patent will, upon request, be returned.

23. An applicant for reissue must file with his petition a statement on oath as follows:

(1) That the original patent is inoperative or invalid.

(2) That such patent is inoperative or invalid by reason of a defective or insufficient specification, particularly specifying such defects or insufficiencies, or

(3) That such patent is inoperative or invalid by reason of the patentee claiming as his own invention or discovery more than he had a right to claim as new, distinctly specifying the part or parts so alleged to have been improperly claimed as new.

(4) Specifying the facts which constitute the inadvertence, accident, or mistake under which the patent originally issued.

(5) That said errors arose without any fraudulent or deceptive intention on the part of the applicant.

THE EXAMINATION.

24. Applications will be examined in their order of filing; but the following applications will have precedence over others, in the order numbered:

(1) Applications wherein the inventions are deemed of peculiar importance to some branch of the public service, and when for that reason the head of a Department of the Government requests immediate action, and the Commissioner so orders;

(2) Applications for reissues;

(3) Applications covering inventions patented by the same inventor in foreign countries, and applications interfering therewith;

(4) Applications which would interfere with another application or with an unexpired patent;

(5) Cases remanded by an appellate tribunal for further action by the Office;

(6) Amended applications.

25. Where the specification and claims are such that the invention may be understood, the examination of a complete application and the action thereon will be directed throughout to the merits; but in each letter the Examiner shall state or refer to all his objections. Only in cases presenting patentable substance will requirements in matters of form be insisted on.

26. Suspensions of actions on applications will be granted only for cause and for a reasonable time specified.

REJECTIONS AND REFERENCES.

27. Upon the rejection of a claim in an application upon references the Examiner will cite the best at his command, fully identified, giving also the class and subclass when patents are cited, and will apply them to the rejected claim. When the rejection is made on facts, the data will be specific, and when within the personal knowledge of an officer of the Bureau they will be supported, when called for, by his affidavit.

28. An applicant will be considered to persist in his claim for a patent without altering his specification in case he fail to act in prosecution of the same for six months after the Office action thereon, and thereupon the Examiner will make a reexamination of the case.

29. When a claim in an application is rejected on reference to a domestic patent which substantially shows or describes but does not claim the rejected invention, or on reference to a foreign patent or to

a printed publication, and the applicant shall make oath to facts showing a completion of the invention in this country before the filing of the application on which the domestic patent issued, or before the foreign patent was issued, or before the date of the printed publication, then the patent or publication cited will not bar the grant of a patent to the applicant. When the rejection is on reference to an unexpired domestic patent which claims the rejected invention, a like affidavit to like facts will be a prerequisite to an interference involving the application and the patent.

30. In every case pending before the Office more than five years in which the record raises the presumption that there have been intentional delays in prosecution the Examiner may require the applicant to show cause why the case was not more rapidly prosecuted, and at the hearing thereon or upon failure of the applicant to appear the Examiner will determine, under all the circumstances of the case, whether there have been intentional and unreasonable delays in prosecution, and upon finding the fact to be so he will reject the case for that reason.

AMENDMENTS.

31. Before final rejection and as often as the Examiner raises new objections or presents new references or reasons for rejection the applicant may amend, but not to incorporate new matter which is a departure from the invention originally presented, unless to combine applications. Amendments objectionable for new matter and departure will be entered for consideration, and when the scope of the claims is affected the claims will be rejected, and in every case the Examiner will require the objectionable new matter to be canceled.

32. New parties may be admitted to a pending application as joint inventors, or some of the parties may be dropped, where they all consent in writing and where the non-joinder or misjoinder was by mistake and without fraudulent intent.

And applications may be amended by dividing out distinct though related inventions or by uniting two or more applications where the inventions are related, but not to put the contents of a later application into an earlier one.

33. In every amendment the matter to be stricken out or inserted must be specified and the point indicated where the erasure or insertion is to be made.

34. When an applicant presents a claim for matter originally shown or described but not substantially embraced in the statement of invention or claim originally presented, he will file a supplemental oath to the effect that the subject-matter of the proposed amendment was part of his invention, was invented before he filed his original application, was not known or used before his invention, was not in public use or on sale in this country for more than two years before the date of his application, and has not been abandoned.

35. During the pendency of an interference amendments of an application will not be entered, except to withdraw subject-matter not adjudged to interfere, or to avoid interference, or to disclaim,

or to claim a patentable invention claimed by another party and shown and described but not claimed by the party who amends, or to comply with the Examiner's requirements, or to add necessary parties, or to drop parties.

36. After final rejection amendments will not be entered, except to conform to the requirements of the Examiner, or to cancel claims, or to present the twice-rejected claims and the related parts of the specification and drawings in better form for consideration on appeal.

37. After the allowance of an application amendments will not be entered except by leave and for cause.

INTERFERENCES.

38. Before an interference will be declared the invention which is to form the subject of the controversy must be claimed by every party and must be considered to be patentable to every party in the absence of the others. When an applicant who is required to put his application in other respects in condition for interference fails to do so for thirty days, he will nevertheless be made a party to the interference and the proceeding will not be further delayed.

39. When patentable substance has been found in an original or reissue application, which is also claimed, and it is found by the Primary Examiner that matter claimed therein would interfere with any pending application, or with an unexpired patent, the Primary Examiner will declare an interference, that the question of priority of invention may be determined; he will clearly define the issue or issues, designating the claims involved in each count, and will prepare notices of interference for all the parties, embodying the issues and the claims involved and disclosing the name and residence of each party, and of his attorney, and of any assignee, and if any party be a patentee, the date and number of the patent; he will determine the seniority of the parties by the filing dates of their respective applications, except when an unexpired patent is involved, in which case the patentee will be the senior party, or, if there be more than one patent involved, the patentee filing first will be senior; and he will forward to the Examiner of Interferences the notices and a statement disclosing the foregoing matters.

40. Each party to the interference will be required to file a concise preliminary statement of the following facts, under oath, on or before a date to be fixed:

(1) The date of original conception of the invention set forth in the declaration of interference;

(2) The date upon which a drawing of the invention was made;

(3) The date upon which a model of the invention was made;

(4) The date upon which the invention was first disclosed to others;

(5) The date of the reduction to practice of the invention;

(6) A statement of the extent of use of the invention.

If a drawing or model has not been made, or if

the invention has not been reduced to practice or disclosed to others, or used to any extent, the statement must specifically disclose these facts.

When the invention was made abroad the statement must set forth:

(1) That applicant made the invention set forth in the declaration of interference:

(2) Whether or not the invention was ever patented; if so, when and where, giving the date and number of each patent:

(3) Whether or not the invention was ever described in a printed publication; if so, when and where, giving the title, place, and date of such publication:

(4) Whether the invention was ever introduced into this country; if so, giving the circumstances, with the dates connected therewith, which are relied upon to establish the fact.

41. The statement must be sealed up in a separate envelop before filing, and the name of the party filing it, the title of the case, and the subject of the invention indicated on the envelop.

42. The preliminary statements will not be open to the inspection of opposing parties until each shall have been approved, or the time for filing the same shall have expired, and it also appears that further testimony must be submitted. After the time for filing preliminary statements has expired, and after the approval of such as have been submitted, the parties will be permitted to see and to obtain copies of each other's file-wrappers and so much of their contents as relate to the interference.

43. From any party in default in filing or perfecting his preliminary statement no testimony will be received to prove that he made the invention at a date prior to his application.

44. When an application is involved in an interference in which a part only of the invention is included in the issue, the applicant may file certified copies of the parts of the specification, claims, and drawings which cover the interfering matter, and such copies may be used in the proceeding in place of the original application, and the application will then be withheld from inspection.

45. When an application involved in an interference shows and describes, without claiming, a patentable invention claimed by another party thereto, the applicant may, at any time within twenty days after the preliminary statements have been approved, on motion duly made, file an amendment of his application claiming such invention, and on the admission of such amendment such claim will be included in the interference.

46. When there is ground for belief that a party in an interference has not received the notice of the proceeding and does not know of it, further notice will be given in THE OFFICIAL GAZETTE.

47. The Primary Examiner will dissolve an interference, first, when no interference in fact exists; second, when there has been such irregularity in declaring the same as will preclude the proper determination of the question of priority or originality; third, when the claims involved in the in-

interference are not patentable; fourth, when a party has no right to make the claims; fifth, upon the filing of a declaration of abandonment of invention; sixth, upon the filing of a disclaimer of all the interfering matter or on the filing of a declaration of abandonment of the application, if in either case this is done before the preliminary statements are open to opponents; but if filed later the consideration of such disclaimer or declaration of abandonment will be postponed until after a decision of the question of priority or originality of invention.

48. The Examiner of Interferences will issue the notices of the interference proceeding, will fix times for filing the preliminary statements and determine their sufficiency, will fix times for the taking of testimony, will transmit allowable motions concerning the burden of proof, patentability, interference in fact, and irregularity in declaring the interference to the Primary Examiner, and will himself decide all other motions and questions of form and procedure in interference practice, and will determine the questions of priority or originality of invention, and fix the limit of appeal.

49. Motions made in good faith within twenty days after the preliminary statements have been approved and not intended for delay will be decided on interlocutory hearing, but not motions that can be as well determined at the hearing on the merits or afterward. Successive motions will not be heard, nor will motions made later than twenty days after the preliminary statements have been approved, unless upon a showing that they could not have been made earlier.

50. Motions will not operate as a stay, except by leave, for cause.

51. In interference cases, when another applicant appears who will ultimately be in interference concerning the same subject-matter, he and all the parties to the pending proceeding will be notified, and on seasonable motion by any of them he may be made a party to the pending proceeding upon such terms as to testimony that may already have been taken as the Examiner of Interferences may prescribe, if such course would more advantageously dispose of the whole contention between all parties, and under the same condition, when new references are discovered, the interference may be suspended to consider them.

52. In interference cases the question of priority or originality of invention will be determined, either upon the testimony, or upon a concession of priority, or by judgment against the junior parties upon the record, or by default.

53. Whenever a final award of priority has been made in an interference, the claims of the defeated party involved in the issue which are made or can be made by the prevailing party will be finally rejected; but other claims which cannot be made by the prevailing party may be allowed to a defeated party.

54. The application of the successful party in interference cases will not be passed to issue until the limit of appeal has expired, and in cases decided by the Commissioner not until forty days after the date

of his decision, unless the defeated parties shall waive their right of appeal.

TESTIMONY IN INTERFERENCES, PUBLIC-USE PROCEEDINGS, AND OTHER CONTESTED CASES.

55. Reasonable notice shall be given to opposing parties, as hereinafter provided, of the time when and place where depositions will be taken, of the cause or matter in which they are to be used, and of the names and residences of witnesses to be examined, and the opposing party shall have full opportunity to cross-examine the witnesses. Neither party shall take testimony in more than one place at the same time, nor so nearly at the same time that reasonable opportunity for travel from one place of examination to the other cannot be had.

56. Service of such notice may be made (1) by delivering a copy of the notice to the adverse party or to his attorney; (2) by leaving a copy at the usual place of business of the adverse party or with his attorney or some one in his employment; (3) when such adverse party or his attorney has no usual place of business, by leaving a copy at his residence, with a member of his family over fourteen years of age and of discretion; (4) by transmission by registered letter; (5) by express, or (6) in such manner as the Commissioner may order. Such notice shall, with sworn proof of the fact, time, and mode of service thereof, be attached to the depositions, whether the opposing party shall have cross-examined or not.

57. Each witness before testifying shall be duly sworn according to law by the officer before whom his deposition shall be taken. The pages of each deposition must be numbered consecutively and the name of the witness written at the top of each page. The testimony will be taken in answer to interrogatories, with the questions and answers committed to writing in their regular order by the officer, or in his presence by some person not interested in the case either as a party thereto or as attorney; but the depositions may be written out by other persons in the presence of the officer or may be taken stenographically in presence of the officer, and when written out shall be read by or to the witness and then signed by him in the presence of the officer. The officer shall annex to the deposition his certificate showing (1) the due administration of the oath by the officer to the witness before the commencement of his testimony; (2) the name of the person by whom the testimony was written out, and the fact that, if not written by the officer, it was written or taken stenographically in his presence; (3) the presence or absence of the adverse party; (4) the place, day, and hour of commencing and taking the deposition; (5) the reading by or to each witness of his deposition before he signs the same, and (6) the fact that the officer was not connected by blood or marriage with either of the parties, nor interested, directly or indirectly, in the matter in controversy. The officer shall sign the certificate and affix thereto his seal of office, if he have such seal. He shall then, without delay, securely seal up all the evidence, notices, and paper

exhibits, inscribe upon the envelop a certificate, giving the title of the case, the name of each witness, and the date of sealing, address the package, and forward the same to the Commissioner of Patents. If the weight or bulk of an exhibit shall exclude it from the envelop, it shall be authenticated by the officer and transmitted in a separate package, marked and addressed as above provided.

58. Upon notice given to the opposite party before the closing of the testimony any official record and any special matter contained in a printed publication, if competent evidence and pertinent to the issue, may be used as evidence at the hearing.

59. All depositions which are taken must be duly filed in the Patent Office. On refusal to file, the Office at its discretion will not further hear or consider the contestant with whom the refusal lies, and the Office may, at its discretion, receive and consider a copy of the withheld deposition, attested by such evidence as is procurable.

60. By leave of the Commissioner, first obtained, testimony may be taken in foreign countries upon complying with the following requirements:

(1) Such permission will be granted only upon motion duly made designating a place for the examination of the witnesses at which an officer duly qualified to take testimony under the laws of the United States in a foreign country shall reside, and it must be accompanied by a statement under oath that the motion is made in good faith and not for purposes of delay, setting forth the names of the witnesses, the particular facts to which it is expected each will testify, and the grounds on which is based the belief that each will so testify.

(2) It must appear that the testimony desired is material and competent and that it cannot be taken in this country at all or without hardship and injury to the moving party greatly exceeding that to which the opposite party will be exposed by the taking of such testimony abroad.

(3) Upon the granting of such motion a time will be set within which the moving party shall file in duplicate the interrogatories to be propounded to each witness, and serve a copy of the same upon each adverse party, who may, within a designated time, file, in duplicate, cross-interrogatories. Objections to any of the interrogatories or cross-interrogatories may be filed at any time before the depositions are taken, and such objections will be considered and determined upon the hearing of the case.

(4) As soon as the interrogatories and cross-interrogatories are decided to be in proper form the Commissioner will cause them to be forwarded to the proper officer with the request that, upon payment of or satisfactory security for his official fees, he notify the witnesses named to appear before him within a designated time and make answer thereto under oath, and that he reduce their answers to writing and transmit the same, under his official seal and signature, to the Commissioner of Patents, with the certificate prescribed in Rule 57.

(5) By stipulation of the parties the requirements of paragraph 3 as to written interrogatories and

cross-interrogatories may be dispensed with, and the testimony may be taken before the proper officer upon oral interrogatories by the parties or their agents.

61. In contested cases six copies of the printed testimony, including the notices of the interference and the preliminary statements, must be furnished one week before the day of hearing; but testimony filed in manuscript cannot be withdrawn by the parties for printing. When desired, the Office will print the testimony at the cost of the parties.

62. Testimony taken in any proceeding in the Patent Office may be used in any other proceeding between the same parties, so far as relevant and material.

APPEALS, PETITIONS, AND MOTIONS.

63. In appealable cases in which no limit of appeal is fixed no appeal will be entertained by any tribunal in the Office unless taken within six months from the action which puts the case in condition for appeal, unless it be shown to the satisfaction of the Commissioner that such delay was unavoidable.

64. Petitions to the Commissioner will lie only from actions which in substance have been twice considered by the Examiner or a second consideration waived.

65. The action of the Primary Examiner or of the Examiner of Interferences will not be reviewed or his discretion controlled in matters of form or procedure, except when there has been an abuse of discretion.

66. No appeal on the patentability of an opponent's claim or upon an opponent's right to make the claim will be heard.

67. Questions *inter partes* before the Primary Examiner will be *inter partes* on appeal.

68. In *ex parte* cases matters of form and procedure, when reviewable under the foregoing rules, and the question of division, may be brought up by petition to the Commissioner. In contested cases matters of form and procedure may be brought up by appeal on motion.

69. Appeals and petitions must contain a specific statement of the reasons therefor.

70. Notices of appeals and motions in contested cases must be served upon all the opposing parties unless such notice is dispensed with for cause.

71. In *ex parte* cases upon the filing of an appeal or petition the Primary Examiner shall, ten days before the date of hearing, furnish the appellate tribunal and the appellant or petitioner with a statement of the grounds of his decision.

72. In contested cases the parties will file six copies of their printed briefs, the junior party or the appellant five days before the hearing and the senior party or the appellee one day.

73. The Examiners-in-Chief and the Examiner of Interferences will direct the attention of the Commissioner to any matter which in any case before them establishes the fact that no interference exists, or that there has been fatal irregularity in declaring the same, or which amounts to a bar to the grant of a patent, or which anticipates any claim.

74. When an appeal is taken to the Court of Appeals of the District of Columbia, the appellant shall give notice thereof to the Commissioner, and file in the Patent Office, within forty days from the date of the decision appealed from, his reasons of appeal, specifically set forth in writing.

75. Cases heard by an appellate tribunal will not be further acted upon by the Primary Examiner except for the consideration of matters not adjudicated, nor will amendments be received except to carry out recommendations or official requirements, unless by consent of the Commissioner.

76. Cases will not be reheard except upon the principles applied by courts in the granting of rehearings or upon the principles governing new trials at law.

ALLOWANCE.

77. After the notice of allowance of an application is given, the case will not be withdrawn from issue on account of any mistake or change of purpose of the applicant or of his attorney, nor for the purpose of enabling the inventor to procure a foreign patent, nor in any other case, without the approval of the Commissioner.

78. The weekly issue of patents will close on Thursday, and the patents of that issue will bear date as of the third Tuesday thereafter.

79. The patent will be delivered or mailed on the day of its date to the attorney of record, if there be one; if not, to the patentee; or, if the attorney so request, to the patentee or assignee of an interest therein.

ASSIGNMENTS.

80. If the assignee hold an undivided part interest, the patent will, upon request, issue jointly to the inventor and the assignee; but the assignment must first have been entered of record and at a day not later than the date of the payment of the final fee; and if the assignment be dated subsequently to the execution of the application, it must give the date of execution of the application, or the date of filing, or the serial number.

81. No instrument will be recorded which does not, in the judgment of the Commissioner, amount to an assignment, grant, mortgage, lien, incumbrance, or license, or which does not affect the title of the patent or invention to which it relates. Such instrument should identify the patent by date and number; or, if the invention be unpatented, the name of the inventor, the serial number, and date of the application should be stated.

82. An order for a copy of an assignment must give the book and page of the record.

CORRECTION OF PATENTS.

83. Whenever a mistake, incurred through the fault of the Office, is clearly disclosed by the records or files of the Office, a certificate stating the fact and nature of such mistake, signed by the Secretary of the Interior, countersigned by the Commissioner of Patents, and sealed with the seal of the Patent Office, will, at the request of the patentee or his assignee, be indorsed without charge upon the Letters Patent and recorded in the records

of patents, and a printed copy thereof attached to each printed copy of the specification and drawing.

Whenever a mistake, incurred through the fault of the Office, constitutes a sufficient legal ground for a reissue, such reissue will be made, for the correction of such mistake only, without charge of Office fees, at the request of the patentee.

Mistakes not incurred through the fault of the Office and not affording legal grounds for reissues will not be corrected after the delivery of the Letters Patent to the patentee or his agent.

CAVEATS.

84. Caveats must comprise a petition, a specification, oath, and, when the nature of the case admits of it, a drawing.

PAYMENTS AND FEES.

85. All payments to the Office must be made in certificates of deposit, post-office money-orders, or certified checks, payable to the order of the Commissioner of Patents or indorsed to him, or in cash, and must be accompanied by a letter stating the amount and for what purpose it is to be applied. After the payment of money has been made, except for final fees, it will not be repaid upon a change of purpose or the abandonment of any application or appeal.

86. Office fees must be paid in advance and all transportation charges prepaid.

EQUITY.

87. The Office, to the extent of its jurisdiction, will consider equitable rights and apply equitable remedies, and whenever the foregoing rules and the established rules of equity are at variance respecting the same matter the rules of equity will prevail, except in matters concerning the ownership or title of inventions, applications, patents, or interests therein.

88. It is the design of the Constitution and the patent laws to secure to the inventor not that which is a matter of common right, nor the property of another, but what he has himself created. The duty of the Office is to grant nothing which already belongs to the domain of the public, but, on the other hand, not to withhold from the inventor any portion of the full benefit of his invention. Its function is to draw the line with even justice between the two.

The foregoing rules are intended to secure this object, and therefore are to be construed and applied in that sense and toward that end.

The foregoing rules are hereby established for the conduct of proceedings in the Patent Office and all other rules and practices, inconsistent herewith, are hereby repealed and annulled, and these regulations will be in effect on and after February 9, 1897.

CIVIL SERVICE IN THE PATENT OFFICE.

In 1869 the Patent Office was reorganized under the direction of the Hon. Samuel S. Fisher, Commissioner of Patents, and the system of competitive and non-competitive examinations for appointments and promotions was introduced. In 1871 a general law was passed by Congress authorizing the

President to establish rules and regulations for the admission of persons in the civil service, but for lack of continued appropriations by Congress the rules were suspended by the President in 1875. In the Patent Office the rules were, however, continued, and to greater or less extent followed, until the law of January 16, 1883, went into effect. Since then the civil service law and rules have been in full effect.

Partly as the result of the act of 1883 and partly as a result of competitive examinations held ever since Commissioner Fisher's incumbency of office in 1869 to 1871 the examining corps at the present time consists of the following force: 33 Primary Examiners, 30 of whom received their appointments as Primary Examiners upon competitive examinations and 3 without; 34 First Assistant Examiners, 33 of whom received their appointments as such upon competitive examinations and 1 without; 38 Second Assistant Examiners, 32 of whom received their appointments as such upon competitive examinations, 5 without, and 1 by reduction from First Assistant Examiner; 43 Third Assistant Examiners, 34 of whom received their appointments as such upon competitive examinations and 9 without; 52 Fourth Assistant Examiners, 39 of whom received their appointments upon competitive examinations, 1 without, 1 by transfer from another Department, and 11 by reduction from higher grades.

Under the present administration 64 original appointments have been made in the examining corps in the lowest grade strictly upon competitive examinations conducted under the direction of the Civil Service Commission, and 3 appointments have been made by transfers from other Bureaus or Departments in the lowest grade. During the same period there have been made 141 promotions within the Office in the corps. All the original appointments were made first for the probationary period of six months, and in all cases but one the appointments were made permanent at the end of the probationary period. A specimen set of the examination papers upon which several appointments have been made is here submitted.

Question 1. What are the laws of fluid pressure due to gravity? Find the total pressure in dynes on the bottom and sides of a cubical vessel (volume 1L.), half filled with mercury and the remainder filled with water. (Specific gravity of mercury=13.6.) [Give work in full.]

Question 2. Define capacity for heat, specific heat, calorie. Describe the Bunsen ice calorimeter and its method of use.

Question 3. What is meant by the critical angle, and how is it

related to the refractive index? What is the critical angle for the surface of separation between air and a medium of refractive index 2?

Question 4. Deduce the formula for the tangent galvanometer. What is the difference between a tangent and a sine galvanometer?

Question 5. What laws govern the production of induced currents? What is Lenz's law? Illustrate by an example.

Question 1. (a) What number added to both terms of the ratio $a:b$ will double the ratio? (b) What number added to each of the numbers $\frac{1}{5}$, 1 , $\frac{88}{5}$, and 42 will make them the four terms of a proportion?

Question 2. Solve the equations

$$2x + 20y = 5xy$$

$$\frac{1}{x^2} + \frac{1}{100y^2} = \frac{17}{400}$$

Question 3. Determine the numbers of regular convex polyhedrons possible.

Question 4. How may the molecular weight of a chemical compound that is volatile without decomposition be determined? Explain fully the fundamental principles involved.

Question 5. Point out the similarities and differences between the three elements Cl, Br, and I, and also of their corresponding compounds with silver.

		FOURTH SUBJECT—Mechanical Drawings—Continued.

Describe the construction and operation of the machine shown in this drawing, naming the different views shown, and the mechanical powers that appear. State the use of the machine.

Of the 67 men so appointed 6 had obtained a scientific education in the Massachusetts Institute of Technology, 13 at Worcester Polytechnic Institute, 2 at the Rensselaer Polytechnic Institute, 2 at the Royal Polytechnic Institute at Munich, 5 at Cornell, 2 at Johns Hopkins, 2 at Yale, 3 at the Naval Academy, 6 at the University of Michigan, 5 at Lehigh University, 1 in Berlin, Germany, and 1 in London. Of the others 10 had achieved what may fairly be considered an equivalent education by private study or in other ways, and the remaining number had less advantages in the way of formal education and training. Of the whole number appointed 32 had had experience in the practice of one or another of the industrial arts, of from one to three years, before their appointments. Of the whole number it may be said that they have made good records in the Office, and of some that they have made highly meritorious records. Of the whole number 9 have resigned to take better po-

sitions in scientific or technical pursuits, 1 has died, and 1 has been transferred to another Bureau.

During the present administration promotions in the corps have been made as follows: 57 from the grade of Fourth to Third Assistant Examiners, all upon competitive examinations held within the Office, and in each case the man standing highest on the list was selected; 40 from the grade of Third to Second Assistant Examiners, all upon competitive examinations held within the Office, and in each case the man standing highest on the list was selected; 25 from the grade of Second to First Assistant Examiners, all as the result of competitive examinations, and in all but two the highest on the list was chosen, and in the two exceptional cases the apparent cause for a different selection was subsequently removed and their promotions followed.

From First Assistant Examiners, Law Clerks, and Chief Clerk to Primary Examiners 9 promotions have been made, all as the result of competitive examinations. Seven were selected as standing highest on the list, and 2 from those standing lower down were selected by reason of records and achievements in the Office as Law Clerk and as Chief Clerk, which were regarded as determining the fitness upon strictly civil service grounds. From the examining corps 2 Primary Examiners have been appointed by the President and confirmed by the Senate for the position of Examiner-in-Chief upon the same principle of selection.

In selecting Fourth Assistant Examiners for temporary appointment, as hereinbefore recited, I had in each case before me the names of three candidates certified by the Civil-Service Commission, and in making the selection consideration was given to the circumstance, first, that the candidate was shown by the affidavits attached to the examination papers, and intrinsically by the papers themselves, to have had that discipline of mind which comes from systematic intellectual pursuits under advantageous circumstances; second, that the candidate had had experience in the industrial and mechanical pursuits or had shown exceptional aptitude for such pursuits, and, third, that so far as the papers showed or a judgment thereon could be formed the candidate would with experience probably achieve that higher discipline and that combination of attainments in law and aptitude for the applied sciences that would fit him to become a Primary Examiner.

In no case have political considerations entered into the question of appointments or promotions, and except in three cases the political preferences of the candidate have not been known.

I think it may be said without ostentation and without mental reservation that the civil service law and the rules under it and the practice grounded upon both have been sincerely applied both in the letter and in the spirit.

At the beginning of this administration there were 605 employees in the Patent Office, of which all of the Assistant Examiners, 167 in number, were in office upon a tenure of merits and achievements alone. The Primary Examiners might have been

appointed upon non-competitive examinations, but none were so appointed. The librarian, 3 Assistant Chiefs of Divisions, and 260 members of the clerical force were within the classified service, under the full operation of competitive examinations as to appointments. The Examiner of Interferences, the Chief Clerk, the Financial Clerk, 3 Chiefs of Divisions, and clerk to the Commissioner were not within the classified service, but have since been placed under it. So also of the messenger and property clerk, the 3 messengers at \$840, the 20 assistant messengers at \$720, and the 15 messenger boys at \$360 a year.

On May 6, 1896, by reason of the clerical and grade duties performed by members of the laboring force receiving \$600 and \$480 a year, 66 out of the whole number of 90 were placed under the classified service.

The 5 clerks at \$1,800 were in office and in the same positions prior to this administration. Of the 6 clerks at \$1,600, 5 are in the same positions, and 1 was promoted on August 1, 1894; of the 14 clerks at \$1,400, 9 were in their present positions prior to the present administration, and 5 have been appointed or promoted during the last four years; of the 51 clerks at \$1,200, 38 were in their present positions, 12 have been promoted or appointed, and 1 reduced from a higher grade during this administration; the position of skilled laborer is filled by a reduction made during the present administration from the examining corps; of the 3 skilled draftsmen at \$1,200 and the 4 at \$1,000, 3 are in the same positions, and 1 has been appointed during the last four years; of the 25 clerks at \$1,000 a year, 11 are in the same positions, 13 have been promoted or appointed, and 1 reduced from a higher grade during the last four years; of the 5 model attendants at \$1,000, 3 are in the same positions and 2 have been promoted during the present administration; of the 10 model attendants at \$800, 3 are in the same positions held prior to this administration, 6 have been appointed or promoted, and 1 reduced from a higher grade during the last four years; of the 60 copyists at \$900 a year, 25 are in the same positions, 33 have been promoted or appointed, and 2 reduced during the last four years; of the 76 copyists at \$720 a year, 20 are in the same positions, 48 have been promoted or appointed, and 8 reduced during the last four years. The messenger and property clerk at \$1,000 was appointed February 15, 1894. Of the 3 messengers at \$840, 1 was in the same position, and 2 have been since appointed; of the 20 assistant messengers at \$720 a year, 5 were in their present positions, 14 have been appointed or promoted, and 1 reduced under the present administration; of the 45 laborers at \$600, 6 are in the same positions, 36 have been appointed or promoted, and 3 reduced from higher grades during the present administration; of the 45 laborers at \$480 a year, 14 are in the same positions, 30 have been appointed or promoted, and 1 reduced during the last four years; and of the 15 messenger boys at \$360 a year, 3 are in the same positions, and 12 have been appointed during the last four years.

The best results of the civil service system cannot be realized until the Office is fairly representative of the political parties in the country in the political preferences of its individual members. This at present is not the case, for, although the civil service act has been in operation somewhat over twelve years, and though eight of those years have been under Democratic administrations and four under a Republican administration, the *personnel* of the Patent Office is probably four-fifths Republican to-day. Of the Examiners-in-Chief, 2 are Republicans and 1 a Democrat, 2 having been appointed under the present administration. Of the Primary Examiners, including the Examiner of Interferences, 26 are Republicans and 7 are Democrats. Of the 3 Chiefs of Divisions, 2 are Democrats and 1 Republican. Of the 3 Assistant Chiefs of Divisions, all are Republicans. The librarian, the machinist, and the Financial Clerk are all Republicans. Of the force in the four rooms of the Commissioner and Assistant Commissioner, 7 in number, 5 are Republicans and 2 are Democrats. Of the 5 \$1,800 clerks, which include the Application Clerk and the Clerk of Interference and Appeal Records, all are Republicans. Of the 6 clerks at \$1,600, all are Republicans. Of the 14 clerks at \$1,400, I cannot speak so positively, but nearly all are Republicans, and of the remainder of the force I am not able to speak so positively, nor is it necessary. No inquiry has ever been made, nor will it be proper to make it, but these things transpire in various ways and come to be sufficiently understood; but the total result is that a body of opinion is formed with a distinct political bias, not outspoken but real, and not always friendly. One result is unusual professions of loyalty during the early stages of an administration, not always followed by acts and expressions entirely consistent therewith.

But these are the unfortunate incidents of the civil service system in its transitional stage from a force almost wholly of one political party to one only approximately representative of the strength of parties among the people. As a whole it may be said without fear of even attempted contradiction that political expression and political independence of action are upon a satisfactory basis in the Patent Office, and that the civil service system has been fully justified here in its tendencies and in its results.

REGULATIONS RESPECTING PROMOTIONS.

There is now under way a plan for the regulation of promotions in the Patent Office under the direct supervision of the Civil Service Commission. If its introduction has not been finally determined upon, I suggest some considerations why it may not be found desirable. For examining candidates for admission to the force and for furnishing highly efficient officers for this Bureau there is little room for doubt as to the highly satisfactory working of the civil service law and rules; but there is provided a probationary period for testing the eligibility and competence of the candidate, and this

part of the system rightly presupposes that such a test is of as much value in making a final appointment as the examination. It is found to be so in practice, and still more must this be so of years of tests. If now promotions are not to be in the untrammelled discretion of the Commissioner from the records of work of the officers of the Bureau and from personal observation of their fitness, capacity, industry, willingness, and study, but is to be determined by a few hours of examination conducted here, the result of which is to be transmitted to the Civil Service Commission and by them certified back here as occasion may call for promotions, the administrative head of this Bureau will be the Civil Service Commission. I incline strongly to the opinion that promotions within the Office and the relative merits of the members of the force can best be determined here, determined far better and more justly than any examination can determine the question.

Some of these considerations are based upon the special character of the work of the Patent Office. Even the strictly clerical work so intimately concerns questions of science on the one side and of law on the other and also concerns questions of practice under the necessarily technical rules of procedure of the Patent Office that a general examination which would be likely to bring to the head of the list those most competent for the various forms of special work would be difficult to frame. To the good administration of the Office and to the development of the civil service system the discretion of the head of the Office is, in my judgment, a necessary element.

Examinations conducted by the Office for its own information, even concerning work of such varied character as I have briefly indicated, are proper and valuable, but to enlarge examinations to determine the whole field of choice and exclude discretion would impose upon the Office a weak and nerveless administration which in the end would not sustain itself either in the result or in the estimation of intelligent critics.

I have a further objection to promotions by general committees, extending through all bureaus in a department so segregated as is this, and have no disposition to take part in promotions in other bureaus about which I can have no comprehensive knowledge, and on the same ground have no desire for the assistance of members of a board from other bureaus to attempt and to suggest promotions in this Bureau. I have little hesitation in recommending, if a recommendation under this head may be permitted, that promotions in the Patent Office may be left, as now, substantially in the discretion of the Commissioner, enlightened but not controlled by such examinations within the various classes as he may see fit to conduct and guided by such principles as his superiors may see fit to lay down by executive order.

PRICES OF PRINTED COPIES OF PATENTS.

Under the act of May 19, 1896, section 493 of the Revised Statutes of the United States was amended,

fixing the price of uncertified printed copies of specifications and drawings so that the maximum cost of a copy shall be ten cents. On May 25, 1896, the Commissioner fixed the following schedule of prices, to go into effect July 1, 1896:

For single copies or any number of unclassified copies.....	.05
For copies by subclasses.....	.03
For copies by classes.....	.02
For the entire set of patents issued.....	.01

Under this statute, taken in connection with section 4903 of the Revised Statutes, I think that the Commissioner may properly accompany the reasons for the rejection of an application with copies of the United States patents relied on as references by the Examiner and transmit them without charge to the applicant. Section 4903 is as follows:

Sec. 4903. Whenever, on examination, any claim for a patent is rejected, the Commissioner shall notify the applicant thereof, giving him briefly the reasons for such rejection, together with such information and references as may be useful in judging of the propriety of renewing his application or of altering his specification; and if, after receiving such notice, the applicant persists in his claim for a patent, with or without altering his specifications, the Commissioner shall order a reëxamination of the case.

But an administrative difficulty is met in the fact that the Office would be required under that procedure to select and transmit more copies of patents than now, and for this work, largely increased under the reduction in prices, the force is now quite inadequate. Class orders for copies have within the last few months increased to such proportions that with its best endeavors the Office is now about five weeks in arrears. It is therefore necessary to defer such a practice to such time as the Office can be supplied with a further force. During the year 1896 printed copies of patents were disposed of as follows: Sold, 775,192; used by the Office, 362,874; furnished other Departments, 17,128; sent to foreign governments, 504,453; total, 1,659,647. Increase since reduction in price shown here: From January to July, 334,931 copies were sold; from July to January 1, 1897, 440,261, an increase of 105,330 since the price was reduced.

THE GROWTH OF THE SYSTEM AND ITS ATTENDANT NEEDS.

By reference to the tables it will be seen that the number of applications of all kinds for patents and for the registration of trade-marks was last year nearly three thousand in excess of the largest previous year in the history of the Patent Office. Accompanying this increase in the work of the examining divisions is a somewhat larger increase of work in the clerical divisions, and there has been no increase in the force of the Patent Office since 1891, when 15 were added, and no substantial increase since 1885, when 58 were added. It is not thought best to press for increases of expenditure in every branch of this Bureau, and yet it may be well to look forward to that equipment for the Patent Office which I am sure will be provided whenever the subject receives that full consideration which its place in the Government and its contribution to the industrial growth of the country and to its wealth are fully appreciated. The work has outgrown the force now provided to accomplish it. Not only the applications are more

in number, but the search in each case covers a continually-expanding field, and, again, the number of claims in each case and their fine distinctions render the examination more exacting and discriminating. It would not be an overliberal increase in the force for the work of examination alone should 10 Primary Examiners and 50 Assistant Examiners be presently provided to be employed wholly upon the regular examination work.

I therefore recommend that the Patent Office be provided with additional force in the examining corps, as follows: 10 Primary Examiners, 10 First Assistant Examiners, 10 Second Assistant Examiners, 15 Third Assistant Examiners, 15 Fourth Assistant Examiners.

The necessary clerical, messenger, and laboring force to accompany these new divisions is estimated to be: 10 clerks at \$1,200, 10 copyists at \$900, 10 messengers at \$720, 10 laborers at \$480, and I recommend that these be provided.

CLASSIFICATION DIVISION.

I have from time to time recommended a classification division rather than ask for any increase in the force for mere examination, and I think that this requirement must ultimately be granted, but it is not by any means the sufficient response to the needs of the Office. Since I first called the attention of Congress to this subject there have been important increases in the total number of patents issued by this and the foreign governments, and the field of search to ascertain the patentability of an invention now extends to 574,368 United States patents and to over 1,058,000 foreign patents. Accordingly, I again submit that the following force should be provided in order to establish a classification division in the Patent Office.

1 Chief of Classification Division.....	\$2,750
2 First Assistant Examiners (each).....	1,800
2 Second Assistant Examiners (each).....	1,600
3 Third Assistant Examiners (each).....	1,400
36 Fourth Assistant Examiners (each).....	1,200
2 Clerks (each).....	1,200
2 Permanent Clerks (each).....	1,000
2 Copyists (each).....	900
2 Assistant Messengers (each).....	720

Total..... \$64,500

As I have heretofore said to the Congress, I regard even the somewhat large expenditure of \$64,500 a year for the estimated period of five years required for the completion of this work as a most just and proper expenditure, literally exacted by the development of the system, as a necessary addition to the equipment of the Office, and a just appropriation of a part of the accumulated fees received from inventors, which in 1896 amounted to \$210,646.12 over and above the annual expenditures of the Office in the administration of the system.

ROOM.

The long-recognized need for more room for the Patent Office has been repeatedly stated, and various plans for effecting it have been considered. This entire building is not excessive for the present needs of the Patent Office.

Respectfully submitted,

JOHN S. SEYMOUR,

Commissioner of Patents.
